A Cairo-based retail startup — one story, three lenses

The three examples below follow **NileMart** — a fictional retail startup based in Cairo — through the same month of operations. Each section examines the same business reality through a different professional lens: **Finance** asks "Are we profitable and solvent?", **Marketing** asks "Are we growing efficiently?", and **Sales** asks "Are we converting and retaining customers?" Together, the three perspectives form a complete picture of the business.

Domain 1 — Finance

Are we profitable? Do we have enough cash to survive and grow?

The Scenario

NileMart is a Cairo-based online and in-store retailer of household goods, operating for 8 months. Management needs to review this month's financial health before deciding whether to open a second branch.

Monthly Snapshot — Key Numbers

Revenue	COGS	Gross Profit	OPEX
1,000,000	600,000	400,000	250,000
EGP	EGP	EGP (40% margin)	EGP

EBITDA	Net Income	Burn Rate	AR / AP
150,000	100,000	50,000	200K / 150K
EGP	EGP (after tax & interest)	EGP / month cash drain	Customers owe vs. owed to suppliers

Walking Through the P&L;

Line Item	Amount	Ratio	Meaning
Revenue	1,000,000 EGP	—	All sales for the month
– COGS	600,000 EGP	60% of revenue	Raw goods + fulfilment
= Gross Profit	400,000 EGP	40% margin	What's left after production
– OPEX	250,000 EGP	25% of revenue	Rent, salaries, ads
= EBITDA	150,000 EGP	15% margin	Core operational earnings
– Interest & Tax	50,000 EGP	—	Loan interest + corp. tax
= Net Income	100,000 EGP	10% net margin	Bottom-line profit

Working Capital & Investment Decision

- **Accounts Receivable (AR) = 200,000 EGP** — customers who bought on credit haven't paid yet. If collection slows, cash tightens despite healthy profits.
- **Accounts Payable (AP) = 150,000 EGP** — NileMart owes suppliers. Paying early sacrifices liquidity; paying late risks supply disruption.
- **Burn Rate = 50,000 EGP/month** — cash reserves are shrinking. At this rate, NileMart has a limited runway before needing fresh capital.
- **CAPEX decision** — opening Branch 2 requires 2,000,000 EGP. Finance runs an **NPV analysis**: if projected future cash flows, discounted at the required return, exceed 2,000,000 EGP, the investment creates value.
- **Balance Sheet check** — assets (inventory, AR, equipment) vs. liabilities (AP, loans) confirms whether the company is solvent enough to take on the CAPEX debt.

Finance Takeaway

NileMart is profitable (Net Income = 100,000 EGP) but cash-constrained (burn rate = 50,000 EGP/month). The P&L; shows a healthy 10% net margin; the balance sheet confirms it can service new debt; and the NPV model indicates Branch 2 is worth pursuing — provided AR collection improves first.

Domain 2 — Marketing

Are we acquiring customers efficiently? Are we keeping them?

The Scenario

NileMart's marketing team ran three campaigns this month: a Google Search ad campaign, an Instagram awareness campaign, and an email re-engagement series. The CMO needs to evaluate which channels are working and where to invest next month's budget.

Campaign Performance Snapshot

Total Ad Spend	New Customers	CAC	Avg. CLV
80,000	400	200	2,400
EGP this month	acquired	EGP per new customer	EGP over 12 months

ROAS	Retention Rate	Churn Rate	NPS
12.5x	72%	28%	+42
Revenue / Ad Spend	customers returning	customers lost	promoters vs. detractors

Channel-by-Channel Breakdown

Channel	Spend	CTR	CPC	ROAS	Insight
Google Search	40,000 EGP	3.8%	22 EGP	8x	Bottom-funnel, high intent
Instagram Ads	30,000 EGP	1.1%	—	4x	Top-funnel awareness; high CPM
Email Re-engage	10,000 EGP	6.2%	9 EGP	18x	Best ROAS — warm leads convert

Funnel Analysis & Optimisation

- **Awareness stage** — Instagram generated 500,000 impressions at a CPM of 60 EGP. Brand awareness is building, but CTR (1.1%) is below target.
- **Consideration stage** — Google drove 8,000 site visits; **Bounce Rate** on the landing page is 54%, signalling a message-to-page mismatch worth an A/B test.

- **Conversion stage** — CPA across all channels = 200 EGP. With CLV at 2,400 EGP, the CLV:CAC ratio is 12:1 — well above the healthy 3:1 benchmark.
- **Retention stage** — 28% churn means NileMart loses nearly 1 in 3 customers monthly. A segmentation exercise groups churned users by category to personalise win-back emails.
- **NPS = +42** — strong advocacy score; promoters are invited to a referral programme, turning satisfaction into low-cost acquisition.

Marketing Takeaway

Email re-engagement delivers the best ROAS (18x) at the lowest CPC (9 EGP) — budget should shift here. A/B testing the Google landing page could cut the 54% bounce rate and improve conversion. Churn at 28% is the biggest risk: a segmented re-engagement campaign targeting lapsed buyers could add 50,000+ EGP in recovered revenue without any incremental acquisition spend.

Domain 3 — Sales

Are we converting prospects into revenue? Are we growing deal value?

The Scenario

NileMart's sales team handles both B2C walk-in customers and a small B2B desk that sells bulk orders to offices and hotels. The sales manager is reviewing pipeline health, rep performance, and whether to expand into a new territory next quarter.

Sales Performance Snapshot

Monthly Revenue	Quota	Win Rate	AOV
1,000,000	900,000	38%	2,500
EGP total	EGP — 111% attainment	deals won vs. closed	EGP per order

Pipeline Value	Sales Cycle	MRR	ARR
4,200,000	14 days	320,000	3,840,000
EGP active deals	avg. B2C 45 days B2B	EGP from subscriptions	EGP annualised

Pipeline & Conversion Walkthrough

Pipeline Stage	Count	Conv. Rate	Notes
Leads (raw)	2,000	—	Enquiries from website, walk-ins, cold calls
Prospects (qualified)	800	40%	Budget, need & timing confirmed by rep
Proposals Sent	420	52.5%	Formal quote or product demo delivered
Deals Won	160	38%	Win rate against total closed opportunities
Deals Lost	260	62%	Mostly lost on price — signals for negotiation training

Deal Quality & Growth Levers

- **AOV = 2,500 EGP** — reps are coached to recommend complementary accessories at checkout (cross-sell), lifting basket size by an average of 15%.
- **Upsell programme** — B2B clients on the basic supply plan are offered a premium next-day delivery tier; 22% upgrade, adding 80,000 EGP MRR.

- **Churn watch** — 18 B2B accounts (6% of base) went quiet this month. The retention playbook triggers a warm call within 48 hours of missed reorder.
- **Territory expansion** — a new rep is being assigned to New Cairo. Historical data shows 340 warm leads in that zone; a cold-call blitz is planned for week one.
- **Forecast** — with 4,200,000 EGP in pipeline and a 38% win rate, the model projects 1,596,000 EGP next month — above the 1,100,000 EGP quota.
- **MRR / ARR tracking** — subscription revenue (3,840,000 EGP ARR) is reported monthly to finance for P&L; accrual and to the board for valuation purposes.

Sales Takeaway

NileMart beat quota at 111% attainment, but a 62% loss rate on proposals signals a pricing or value-communication gap worth addressing in the next sales training. The B2B upsell programme is the fastest path to MRR growth. Expanding into New Cairo — backed by 340 warm leads and a solid 38% win rate — is projected to add 200,000+ EGP in monthly revenue within 90 days.

How the Three Domains Connect for NileMart

Domain	Core Question	This Month's Signal	Key Action
Finance	Are we solvent and profitable?	Net Income 100K EGP; burn rate 50K/month	Improve AR collection before CAPEX
Marketing	Are we acquiring & retaining efficiently?	ROAS 12.5x; churn 28%; NPS +42	Shift budget to email; A/B test landing page
Sales	Are we converting and growing deal value?	111% quota; 38% win rate; ARR 3.84M EGP	Fix proposal loss rate; expand to New Cairo

All three domains are examining the same business — NileMart Cairo — in the same month. Finance confirms the unit economics. Marketing explains where customers come from and how to keep them. Sales tracks how opportunities become revenue. Together, they form the complete operating picture.
